

DISH Network and BIAP Announce Partnership to Bring Glassbooth Interactive Political Content to More Than 13.6 Million DISH Network Customers

Interactive Television Offers Viewers Insights into the 2008 Presidential Election

DISH Network® and BIAP respond to advertisers' call for more targeted and measurable television advertising through the launch of "DISH Decision 2008," an election portal which provides DISH Network viewers with an innovative way to access political information on the national, state and local level.

Initial content for DISH Decision 2008 comes from the partnership with the nonprofit organization Glassbooth (<http://www.glassbooth.org>). Glassbooth's technology enables viewers to rank the importance of key issues related to candidates, and answer a series of questions based on their personal rankings. The survey results provide users with a match of the presidential candidate that most closely aligns with their views. Until recently, Glassbooth has only been available online. Now DISH Network customers can access Glassbooth on TV.

"DISH Network is the first in the country to provide this unique interactive television application," said Michael Kelly, executive vice president. "The majority of Americans follow the election on their televisions through news and information networks. Now these same American voters can dig deeper into the election on that very same medium, their television set. Only DISH Network customers will have this ability."

"The Internet has allowed Glassbooth to remix the way voters interact with political information in ways never before possible," said Alex Jacobs, Founder and Director of Marketing at Glassbooth Corp. "DISH Network and BIAP are fantastic partners: they align with our core values of education and interactive access to unbiased information, and are bringing Glassbooth to America in a way never before possible in the television medium."

The DISH Decision 2008 election portal is revolutionary on several fronts. It brings interactivity and clarity to DISH Network customers in this complex election landscape, while also offering candidates and advertisers the ability to target viewers by placing tailored messages around specific issues, topics and geographies. In a year with political advertising approaching \$3 billion, advanced advertising techniques proven on the Internet are in high demand on TV. BIAP is delivering targeted, localized and hence highly relevant political content and advertising across the unprecedented volume of the 13.695 million national DISH Network footprint -- a powerful, and until now elusive, combination on TV.

"This partnership is a big step in the advancement of interactive TV," said Julie Roehm, Marketing Communications Consultant for BIAP. "We are proud to partner with DISH Network to bring its customers this high-quality, non-partisan community service. This partnership marks a new frontier where consumers can easily navigate through the sea of political content and, based on their personal interests, advertisers can provide targeted and highly relevant commercial messages."

“The majority of Americans follow the election on their televisions through news and information networks. Now these same American voters can dig deeper into the election on that very same medium, their television set. Only DISH Network customers will have this ability.”

In the coming months, a second-generation application of the election portal will be available to include interactive 30-second ads that link to advanced features such as detailed, targeted content, long-form video, requests for information, and other lead-generating features tailored to the political process. These advanced features are available to all DISH Network customers free of charge, and no additional equipment is required to run and view the service.

About EchoStar Communications Corporation

EchoStar Communications Corporation (Nasdaq: DISH) has been a leader for more than 27 years in satellite TV equipment sales and support worldwide. The Company's DISH Network® is the fastest-growing pay-TV provider in the country since 2000, providing more than 13.695 million satellite TV customers with industry-leading customer satisfaction which has surpassed major cable companies for seven years running.
