

DISH Uses ServiceNow to Help Build, Manage and Operate Its SMART 5G™ Network

ServiceNow's workflow solutions to enable full network visibility and help ensure successful deployment and maintenance of DISH's cloud-based 5G network

SANTA CLARA, CA & LITTLETON, CO — February 23, 2022 – DISH Network (NASDAQ: DISH) and ServiceNow (NYSE: NOW) today announced that DISH Wireless will use the ServiceNow Platform to standardize network and service operations on America's first Smart Network™. DISH Wireless added ServiceNow to its growing list of 5G network partners to help ensure the successful construction, deployment and maintenance of its ambitious, standalone, 5G cloud-based network.

ServiceNow's ability to connect systems, data and people across customer and service operations all on one platform offers DISH better customer and enterprise experiences, while also reducing costs. ServiceNow's solutions will provide DISH end-to-end visibility of its entire 5G network on one platform. This will help drive efficiencies across incident and service management as well as streamline communication between agents, field operators and customers to solve problems and deliver better customer service.

"ServiceNow offers unrivaled workflows capable of supporting a network of this size and complexity, poised to break barriers in this industry," said Jeff McSchooler, EVP, Wireless Network Operations, DISH Wireless. "Not only will this partnership streamline our network operations, but it also provides a long-term opportunity to help us deepen our own services and offerings, delivering better network experiences over our SMART 5G™ Network."

When an issue arises on DISH's 5G network, notifications will be automatically sent to the ServiceNow Platform, where the issue is then assessed for priority and customer impact. These workflows also proactively notify customers and help DISH teams quickly make adjustments through initiating work orders and dispatching field service technicians to the right location for installations, repairs or maintenance.

"The future of every industry – from autonomous vehicles to remote surgery to smart cities – is dependent on making 5G work," said ServiceNow President and CEO Bill McDermott. "5G gives customers the speed advantage in the acceleration economy. It is an honor to partner with DISH to make America's First Smart Network a reality."

About DISH

DISH Network Corporation is a connectivity company. Since 1980, it has served as a disruptive force, driving innovation and value on behalf of consumers. Through its subsidiaries, the company provides television entertainment and award-winning technology to millions of customers with its satellite DISH TV and streaming SLING TV services. In 2020, the company became a nationwide U.S. wireless carrier through the acquisition of Boost Mobile. DISH continues to innovate in wireless, building the nation's first virtualized, O-RAN 5G broadband network. DISH Network Corporation (NASDAQ:[DISH](#)) is a Fortune 200 company.
